

Resolute Networks Expanding Atlanta Presence

Company to move major marketing and sales functions to its US Headquarters

Atlanta, Georgia – Nov 6th, 2005 – Resolute Networks Ltd today announced that the company plans to expand its US operation in Atlanta, Georgia during the course of 2006. This follows a sharp increase in demand for its solutions in the North American market and other major market developments in the areas of strategic importance to Resolute.

Resolute opened its US Headquarters in Atlanta in mid-2004, with extensive support from the American-Israel Chamber of Commerce (AICC). This was followed by the start of collaboration with the Atlanta-based Arris Inc. under the auspices of the US-Israel Bi-national Industrial R&D Foundation (BIRD Foundation). In February of this year, Arris and Resolute participated in the US-Israel Broadband Exchange, organized in Atlanta by the Chamber and Cox Communications where this transaction was announced, and in June, was recognized as the “Deal of the Year” at AICC’s annual Eagle Star Awards Gala.

"With the strong market traction we are experiencing in the US, coupled with the excellent support we are receiving from the AICC in Atlanta, it is a natural step to boost our management and support staff in our office there", says Zeev Pritzker, CEO of Resolute. "Atlanta is a major telecommunications hub and has a concentration of major broadband equipment vendors that is very central to our market."

"I am very pleased that Resolute Networks has found success in Georgia and is expanding in Atlanta to meet the growing needs of its customers," Georgia Governor Sonny Perdue said. "Telecommunications is a key industry for Georgia, and this announcement shows that we continue to be a leader in this important technology sector."

The Resolute Networks announcement was made today by Governor Perdue from Ra'anana, where he is leading the Georgia Technology and Trade Mission to Israel.

About Resolute Networks

Resolute Networks Ltd. is a leading provider of standards-compliant sub-system and OEM solutions for circuit-emulation applications.
